

PEGASUS

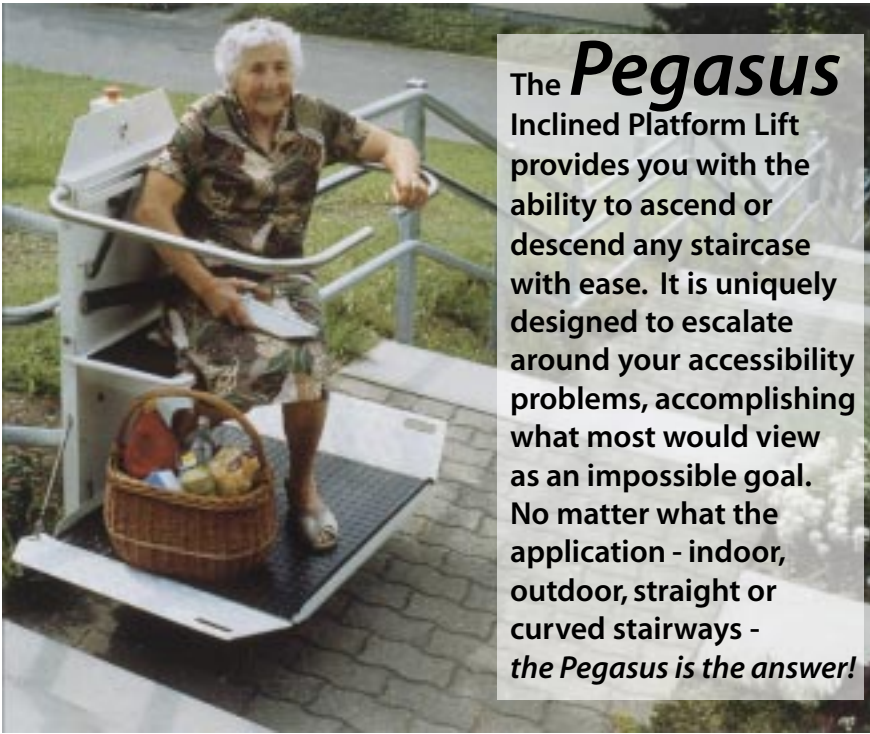

Inclined Platform Lift

The Pegasus' 32" platform is the largest in the industry. The larger platform size allows access to a great variety of wheelchairs. In spite of its spacious dimensions, the unit protrudes less than 12½" from the wall when folded.

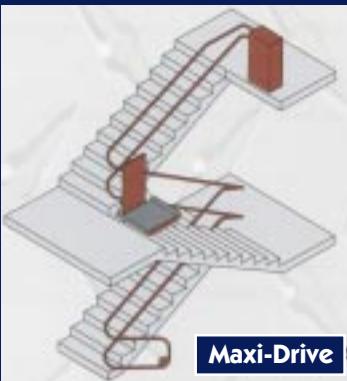

Upon reaching the preferred level, the Pegasus raises the safety barrier arm to a vertical position and the access ramp lowers to allow the user to exit the lift.

The **Pegasus** Inclined Platform Lift provides you with the ability to ascend or descend any staircase with ease. It is uniquely designed to escalate around your accessibility problems, accomplishing what most would view as an impossible goal. No matter what the application - indoor, outdoor, straight or curved stairways - *the Pegasus is the answer!*

Options

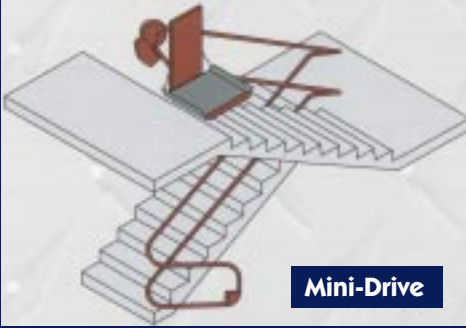

- Manual folding platform and barrier arms - Model LX
- Folding seat
- Platform lock
- Stainless steel or galvanized rails for outdoor applications
- Integrated handrail

Maxi-Drive

The Pegasus is equipped with either a maxi-drive or mini-drive depending on the application. Our unique "maxi-drive" system is designed to traverse a distance of 200 feet, depending on the stairway configuration. For typical installations that require less than 40 feet of travel, we provide our "mini-drive."

Traveling at a speed of 29 feet per minute, each drive system has a capacity of 450 lbs. With the capabilities of negotiating curved and straight stairways, the Pegasus can overcome any architectural barrier.

Mini-Drive

By utilizing the buttons on the hall station, the Pegasus CD will unfold. The safety barrier arm goes up to the vertical position and the access ramp folds down to allow the user to enter the lift.

Safety Devices

- Pressure sensitive features stop the unit upon encountering an obstruction
- Overspeed safety
- Safety barrier arms
- Ramps fold to safety position
- Emergency stop
